

Hobart Airport Runway Extension.

Building for the future.

The runway's extension is being supported with funding assistance of \$38 million from the Australian Government. Hobart Airport is contributing a further \$2 million.

The runway will be extended:

- 150 metres to the north
- 350 metres to the south

The project will result in changes to traffic and access for the local community and business.

Why do we need a longer runway?

A longer runway opens up exciting new opportunities for Tasmania and enables larger aircraft to fly further from Hobart. The longer runway can enable:

Freight – deliver new opportunities for direct export straight to important Asian markets for our seafood, fruit and other fresh produce;

Tourism – provide the potential for direct passenger flights between Hobart and Asian Markets as well as one stop flights to Europe;

Antarctic – strengthening Hobart's position as the preferred Antarctic Gateway by providing a complete logistic hub with increased aviation capability.

The extension of the Hobart Airport runway provides important infrastructure for Tasmania.

The Major Development Plan for this project has been approved. This plan has been developed in consultation with many people, including community groups, local businesses, and all levels of government.

SNAPSHOT

500m

Runway extension

Allowing larger aircraft to fly further from Hobart.

Global reach

Direct flights to international destinations.

We welcome your comments

If your community group would like to meet with us to discuss the runway project, please contact us on 03 6216 1600.
